### **Service inserts with pre-setting for RAV and RAVL valve bodies**

A series of service inserts for Danfoss RAV and RAVL valves is being introduced.

Especially in the German market there is an increased demand to save energy in heating systems. One way to decrease the consumption is by obtaining hydraulic balance in the system.

Hydraulic balance is obtained when the flow of water to every radiator is adjusted to meet the accurate heat demand, and this is done using radiator valves with pre-setting.

The pre-setting insert is mounted directly into the old RAV and RAVL valve body offering the customer a balanced system to a lower price compared to the cost of changing the entire valve. Sensor connection is RA 2000.

Product class 034, stat. No. 0399

Insert for RAVL 10 and 15	code no. 013G4011	EAN 5702420050003
Insert for RAVL 20	code no. 013G4012	EAN 5702420050027
Insert for RAV 10, 15, 20	code no. 013G4013	EAN 5702420050058

EAN numbers are all shown in the CD intranet site

Packaging:

- Plastic bag containing 1 pcs
- Carton containing 10 bags
  - Multipack containing 12 cartons = 120 pcs

Delivery from Mid-November
